1 · style: wrap, bounding box

Body text set beside a box that states no text wrap of its own. Whether these lines step aside for it, and how far, is its object style's to say, and only when the style switches the category on. A line that meets the box starts after it when the wrap is on and runs straight across it when it is off; a jump-object wrap leaves those lines empty and carries on below. More words keep the frame full to its foot, so every line that meets the box shows the rule at a glance.

2 · style: wrap, category off

Body text set beside a box that states no text wrap of its own. Whether these lines step aside for it, and how far, is its object style's to say, and only when the style switches the category on. A line that meets the box starts after it when the wrap is on and runs straight across it when it is off; a jump-object wrap leaves those lines empty and carries on below. More words keep the frame full to its foot, so every line that meets the box shows the rule at a glance.

3 · style: wrap, no Enable flag

Body text set beside a box that states no text wrap of its own. Whether these lines step aside for it, and how far, is its object style's to say, and only when the style switches the category on. A line that meets the box starts after it when the wrap is on and runs straight across it when it is off; a jump-object wrap leaves those lines empty and carries on below. More words keep the frame full to its foot, so every line that meets the box shows the rule at a glance.

4 · based on 1

Body text set beside a box that states no text wrap of its own. Whether these lines step aside for it, and how far, is its object style's to say, and only when the style switches the category on. A line that meets the box starts after it when the wrap is on and runs straight across it when it is off; a jump-object wrap leaves those lines empty and carries on below. More words keep the frame full to its foot, so every line that meets the box shows the rule at a glance.

5 · style 1, object: no wrap

Body text set beside a box that states no text wrap of its own. Whether these lines step aside for it, and how far, is its object style's to say, and only when the style switches the category on. A line that meets the box starts after it when the wrap is on and runs straight across it when it is off; a jump-object wrap leaves those lines empty and carries on below. More words keep the frame full to its foot, so every line that meets the box shows the rule at a glance.

6 · style: wrap, jump object

Body text set beside a box that states no text wrap of its own.

Whether these lines step aside for it, and how far, is its object style's to say, and only when the style switches the category on. A line that meets the box starts after it when the wrap is on and

7 · style: anchored, right of the frame

Anchored here: where the box stands is its object style's to say, unless the box says otherwise.

8 · style: anchored, category off

Anchored  here: where the box stands is its object style's to say, unless the box says otherwise.

9 · based on 7

Anchored  here: where the box stands is its object style's to say, unless the box says otherwise.

10 · style 7, object: x offset −20

Anchored here: where the box stands is its object style's to say, unless the box says otherwise.

11 · style: above the line, centred

Anchored here: where the box stands is its object style's to say, unless the box says otherwise.

12 · style: anchored, no Enable flag

Anchored  here: where the box stands is its object style's to say, unless the box says otherwise.
